

Banking Solutions With AppVision PSIM™

Published on December 20, 2016

In 2016 AppVision PSIM™ continued to be well deployed in the banking sector with several high level projects in Europe and Middle East.

A key requirement in this vertical market is the need to manage a large number of geographically widespread branches and provide security support from head office control rooms and local area offices. AppVision PSIM™ provide this with a reliable and easy to use command & control room platform that remotely monitors and manages different security and life-safety systems.

***Security staff in these projects rely on
AppVision PSIM™ for their day to day
operations***

For example during 2016 an additional two major banks in Saudi Arabia deployed AppVision PSIM™ to centrally monitor and control the different life safety and security systems of their branches, AppVision PSIM™ is used to protect the employees and assets by integrating open and proprietary systems without having to invest in expensive upgrades and replacements while implementing automated security handling and workflow processes and procedures to assure the compliance with the bank regulations. Security staff in these projects rely on AppVision PSIM™ for their day to day operations and are gradually adding more branches to reach over exceed 300 in the coming months.
