

Prysm Software releases low cost access control solution for ONVIF controllers

Published on November 25, 2016

Prysm Software has today released AppEntry™, its long awaited entry level access control and ONVIF 16 camera solution.

The advent of open architecture door controllers is expected to grow significantly and replace proprietary systems since they offer more flexibility and choice for buyers

AppEntry™ is a very simple and low cost access control solution for open architecture door controllers such as the Axis A1001 and multiple doors with Assa Apero locks. It is simple to install and configure with automatic network detection of controllers and step by step configuration.

AppEntry™ is already available from selected distributors such as Anixter.
